Nuclear structure
Replication, recombination and repair
Cytoskeleton
Chromatin structure and dynamics
Secondary metabolites biosynthesis, transport and catabolism
Signal transduction mechanisms
Extracellular structures
Amino acid transport and metabolism
Carbohydrate transport and metabolism
Cell wall/membrane/envelope biogenesis
Inorganic ion transport and metabolism
Lipid transport and metabolism
RNA processing and modification
Intracellular trafficking, secretion, and vesicular transport
Nucleotide transport and metabolism
Cell cycle control, cell division, chromosome partitioning
Posttranslational modification, protein turnover, chaperones
Defense mechanisms
Transcription
Cell motility
Translation, ribosomal structure and biogenesis
Energy production and conversion
Coenzyme transport and metabolism
