signed −log10 p (unadjusted)
Cell motility
Translation, ribosomal structure and biogenesis
Nuclear structure
Energy production and conversion
Cytoskeleton
Nucleotide transport and metabolism
Transcription
Intracellular trafficking, secretion, and vesicular transport
RNA processing and modification
Lipid transport and metabolism
Replication, recombination and repair
Coenzyme transport and metabolism
Signal transduction mechanisms
Extracellular structures
Secondary metabolites biosynthesis, transport and catabolism
Carbohydrate transport and metabolism
Amino acid transport and metabolism
Cell wall/membrane/envelope biogenesis
Inorganic ion transport and metabolism
Defense mechanisms
Posttranslational modification, protein turnover, chaperones
Function Unknown
Cell cycle control, cell division, chromosome partitioning
Chromatin structure and dynamics
