signed −log10 p (unadjusted)
Signal transduction mechanisms
Extracellular structures
Replication, recombination and repair
Coenzyme transport and metabolism
Secondary metabolites biosynthesis, transport and catabolism
Carbohydrate transport and metabolism
Amino acid transport and metabolism
Cell wall/membrane/envelope biogenesis
Posttranslational modification, protein turnover, chaperones
Function Unknown
Cell cycle control, cell division, chromosome partitioning
Chromatin structure and dynamics
Inorganic ion transport and metabolism
Defense mechanisms
Energy production and conversion
Cytoskeleton
Transcription
Intracellular trafficking, secretion, and vesicular transport
RNA processing and modification
Lipid transport and metabolism
Nucleotide transport and metabolism
Cell motility
Translation, ribosomal structure and biogenesis
Nuclear structure
